

ROLL MASKER TAPE

ROLL MASKER TAPE

Can-Do National Tape, a converter / fabricator of pressure sensitive adhesive products and related material, custom designs a roll masker product for use in paint overspray applications for the automotive, aerospace and other industrial markets.

The base material is a 1.8 mil polypropylene film that protects against bleedthrough of solvents and paints.

Key Features:

- Reliable performance in bake cycles up to 315°F (157°C).
- Compatible with all paint systems.
- Resistance to paint flaking.
- Translucency for accurate placement.
- Softness to prevent scratching to clear coats.
- Conformability and soft draping for ease of handling.

To attach the roll masker to the component, Can-Do utilizes a variety of masking products, both paper and film, to meet temperature requirements and the conformability needs and the substrate specifications.
